

Immer eine Lage besser

True quality with a heart for technology

High-grade hygiene paper is manufactured in Miltenberg for people and markets in Europe using experience, enthusiasm and the very latest technology.

Welcome to Fripa.

Fripa set up PM7 in Miltenberg at the end of 2014, giving it one of the fastest and most advanced tissue paper machines in the world.

Thinking ahead. Collaborating as partners. Going forward courageously.

With more than 400 employees and an intentionally small, focused management team, Fripa is a powerful, dependable and personally committed partner and advisor to traders and retailers throughout the European market.

Hermann Friedrich founded a paper processing firm in Berlin in 1911. By 1948 this had become the **Fripa** paper factory (short for **Friedrich Papier**) managed by his son Albert Friedrich at their new site in Miltenberg.

Today this modestly sized family company at the river Main is one of Germany's most powerful hygiene paper manufacturers. This is the result of continuous investment which has allowed the company to grow steadily and healthily.

Fripa values its independence – an independence which allows it to respond more flexibly to markets and the requirements of the trade than its rivals, some of whom are considerably larger.

By taking this approach, **Fripa** has become an expert partner and advisor to merchants and retailers, setting standards in production quality, reliable logistics and personal service, which includes the development of new products coupled with appropriate marketing strategies.

It is this dynamic which, every day for more than 100 years, has given **Fripa** its unique all-round quality which keeps it always a cut above.

Enjoy reading!

 Managing Partner Managing Director

Looking firmly to the future: managing partner Verena Queck-Glimm together with the managing director Torsten Bahl taking a tour of the company.

THE HEART OF THE COMPANY

The site at Miltenberg has been the headquarters of Fripa since 1948. It has grown steadily and careful investments have been made in production technology and warehousing logistics. As a result, this production facility has for several years been one of the most advanced hygiene paper factories in Europe.

Substantial landmark: the ultra-modern high-bay warehouse built in 2011 is not only a highly visible symbol of the Fripa paper factory, it is also a strong statement of the structural strength of the region surrounding Miltenberg as a location.

A strong basis for many markets: high-bay warehouse 2 has a capacity of approximately 21,500 pallets, ensuring punctual and dependable delivery at all times.

Calm outside, in motion inside.

How things work at Fripa.

365 days a year, 24 hours a day: Fripa paper factory is a real performance centre where people and machines work hand-in-hand to form an effective system.

The highly developed production and processing technology facilitates a precise, seamless production process which

can actively accommodate the rhythms of increasingly dynamic markets and supply them reliably with goods.

Interaction, second by second: at Fripa, people and machines work effectively together to fulfil the demands of quantity and the need for quality, down to the last detail.

2100 m/min. Sometimes numbers say more than words alone ...

PM7 is not only an extraordinarily high-performance tissue machine, it also leads the way in terms of energy efficiency and the protection of resources.

After installing what was already a modern and powerful PM6 in the year 2008, Fripa quickly invested in PM7 in 2014, giving it another high-performance "engine" whose groundbreaking ecological specifications and optimised energy usage contribute significantly to sustainable production in keeping with the demands of our times.

For instance, a closed circuit reuses process water as often as possible, which reduces the quantity of waste water.

In this way, PM7 combines performance and the protection of resources by equalling the "best available technology" (BAT) in every relevant area and sometimes even exceeding it.

A new dimension of paper performance: Since 2015, PM7 will be producing approximately 36,000 extra tonnes of tissue paper a year in Miltenberg.

Producing paper with passion: handkerchiefs, toilet paper, household paper towels – the quality of each and every product is determined at the outset by the machines which make the paper (such as PM7 pictured here). That's why Fripa not only emphasises the speed of its machines, but also exercises as much care as possible in monitoring quality.

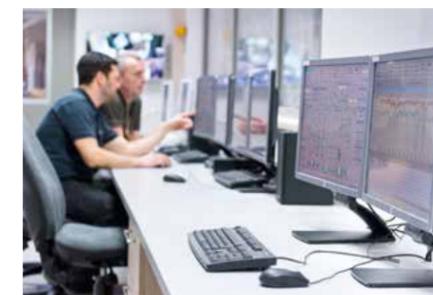

The basis for many different products: freshly produced 2700 mm wide mother rolls provide the foundation for all of the processing that takes place afterwards.

Well rounded: state-of-the-art performance.

A major aspect of Fripa's corporate philosophy is 24/7 availability and performance. That's why all of the areas of production and logistics are precisely interconnected and controlled so that high-grade paper products can be made around the clock at Miltenberg.

The whole production process at **Fripa** is efficiently organised, from manufacturing, to packaging, to the storing of products. As well as a series of modern paper machines, this location possesses a system made up of various high-performance rewinders, a number of

paper towel and handkerchief folding machines, and a highly specialised medicinal roll rewriter. This equipment provides the basis upon which they can manufacture more than one million europallets of finished products a year in Miltenberg.

Every process is controlled and monitored at Fripa using high-precision technology.

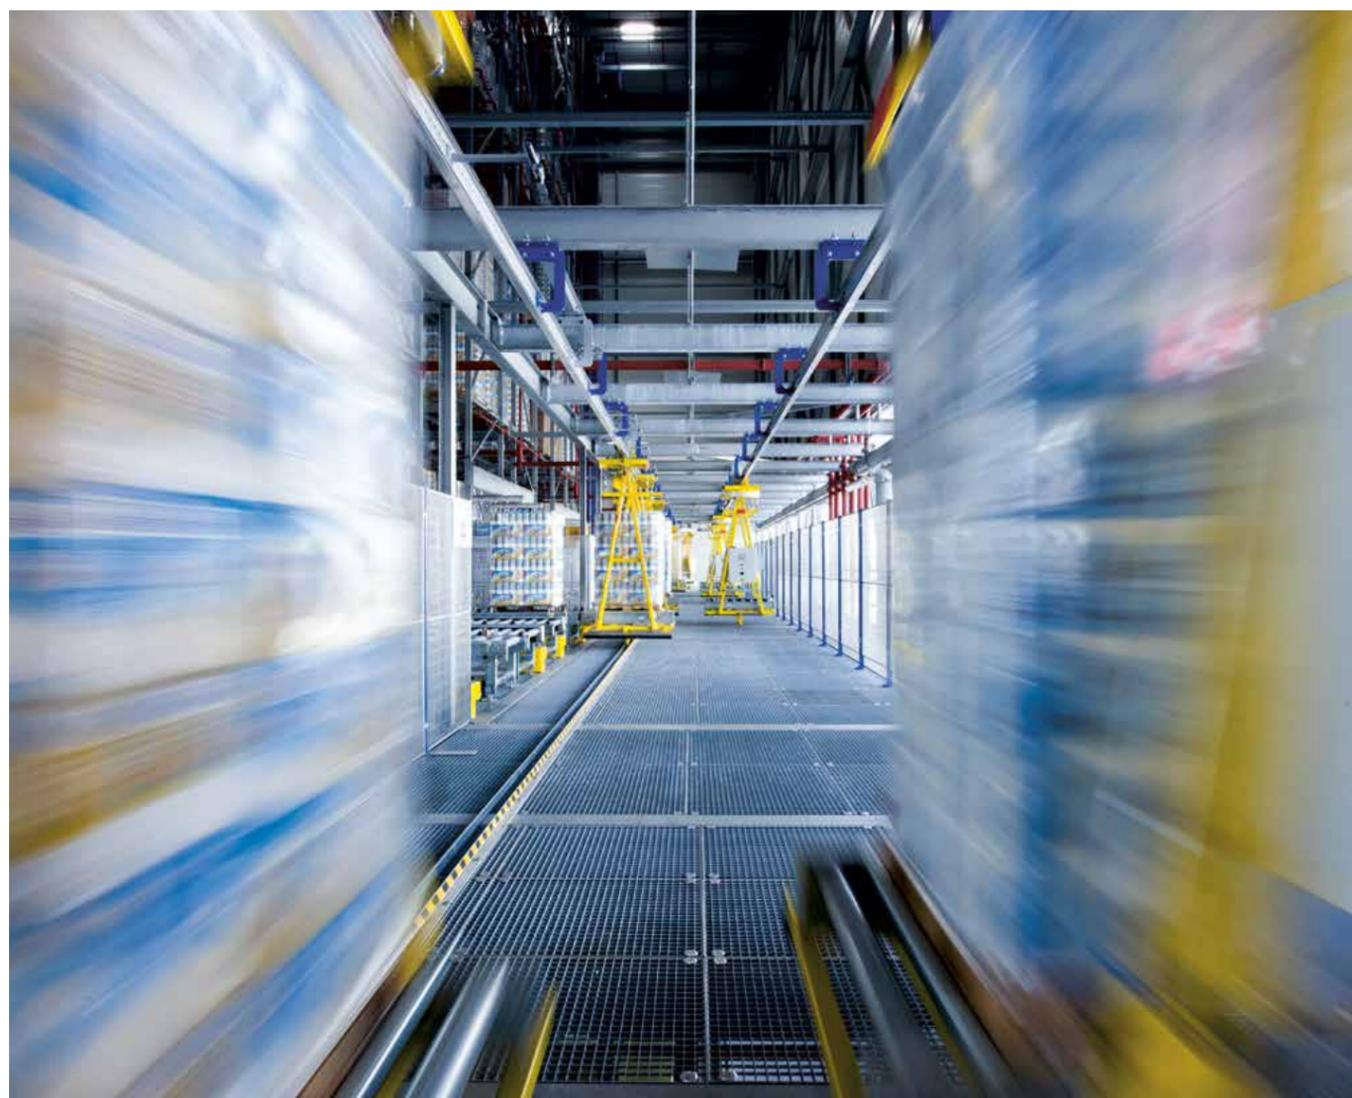

Speed is what determines the rhythm. Also in the high-bay warehouse.

The fully automated high-bay warehouse 2 provides the main basis for the highly dependable supply logistics for which Fripa is known among its customers in retail and trade.

This allows the company's well-known strengths such as product quality and Fripa's dependable and committed service to be guaranteed and expanded.

Using this seamless system, Fripa's diverse products can always be supplied on time in their various markets.

The epitome of high-speed: the warehouse is connected to production via a dual feed system. All of the operations in the high-bay warehouse are performed fully automatically using intelligent control and robotic systems: this allows them to be done quickly, which is very important nowadays.

Many movements, one goal: always a cut above.

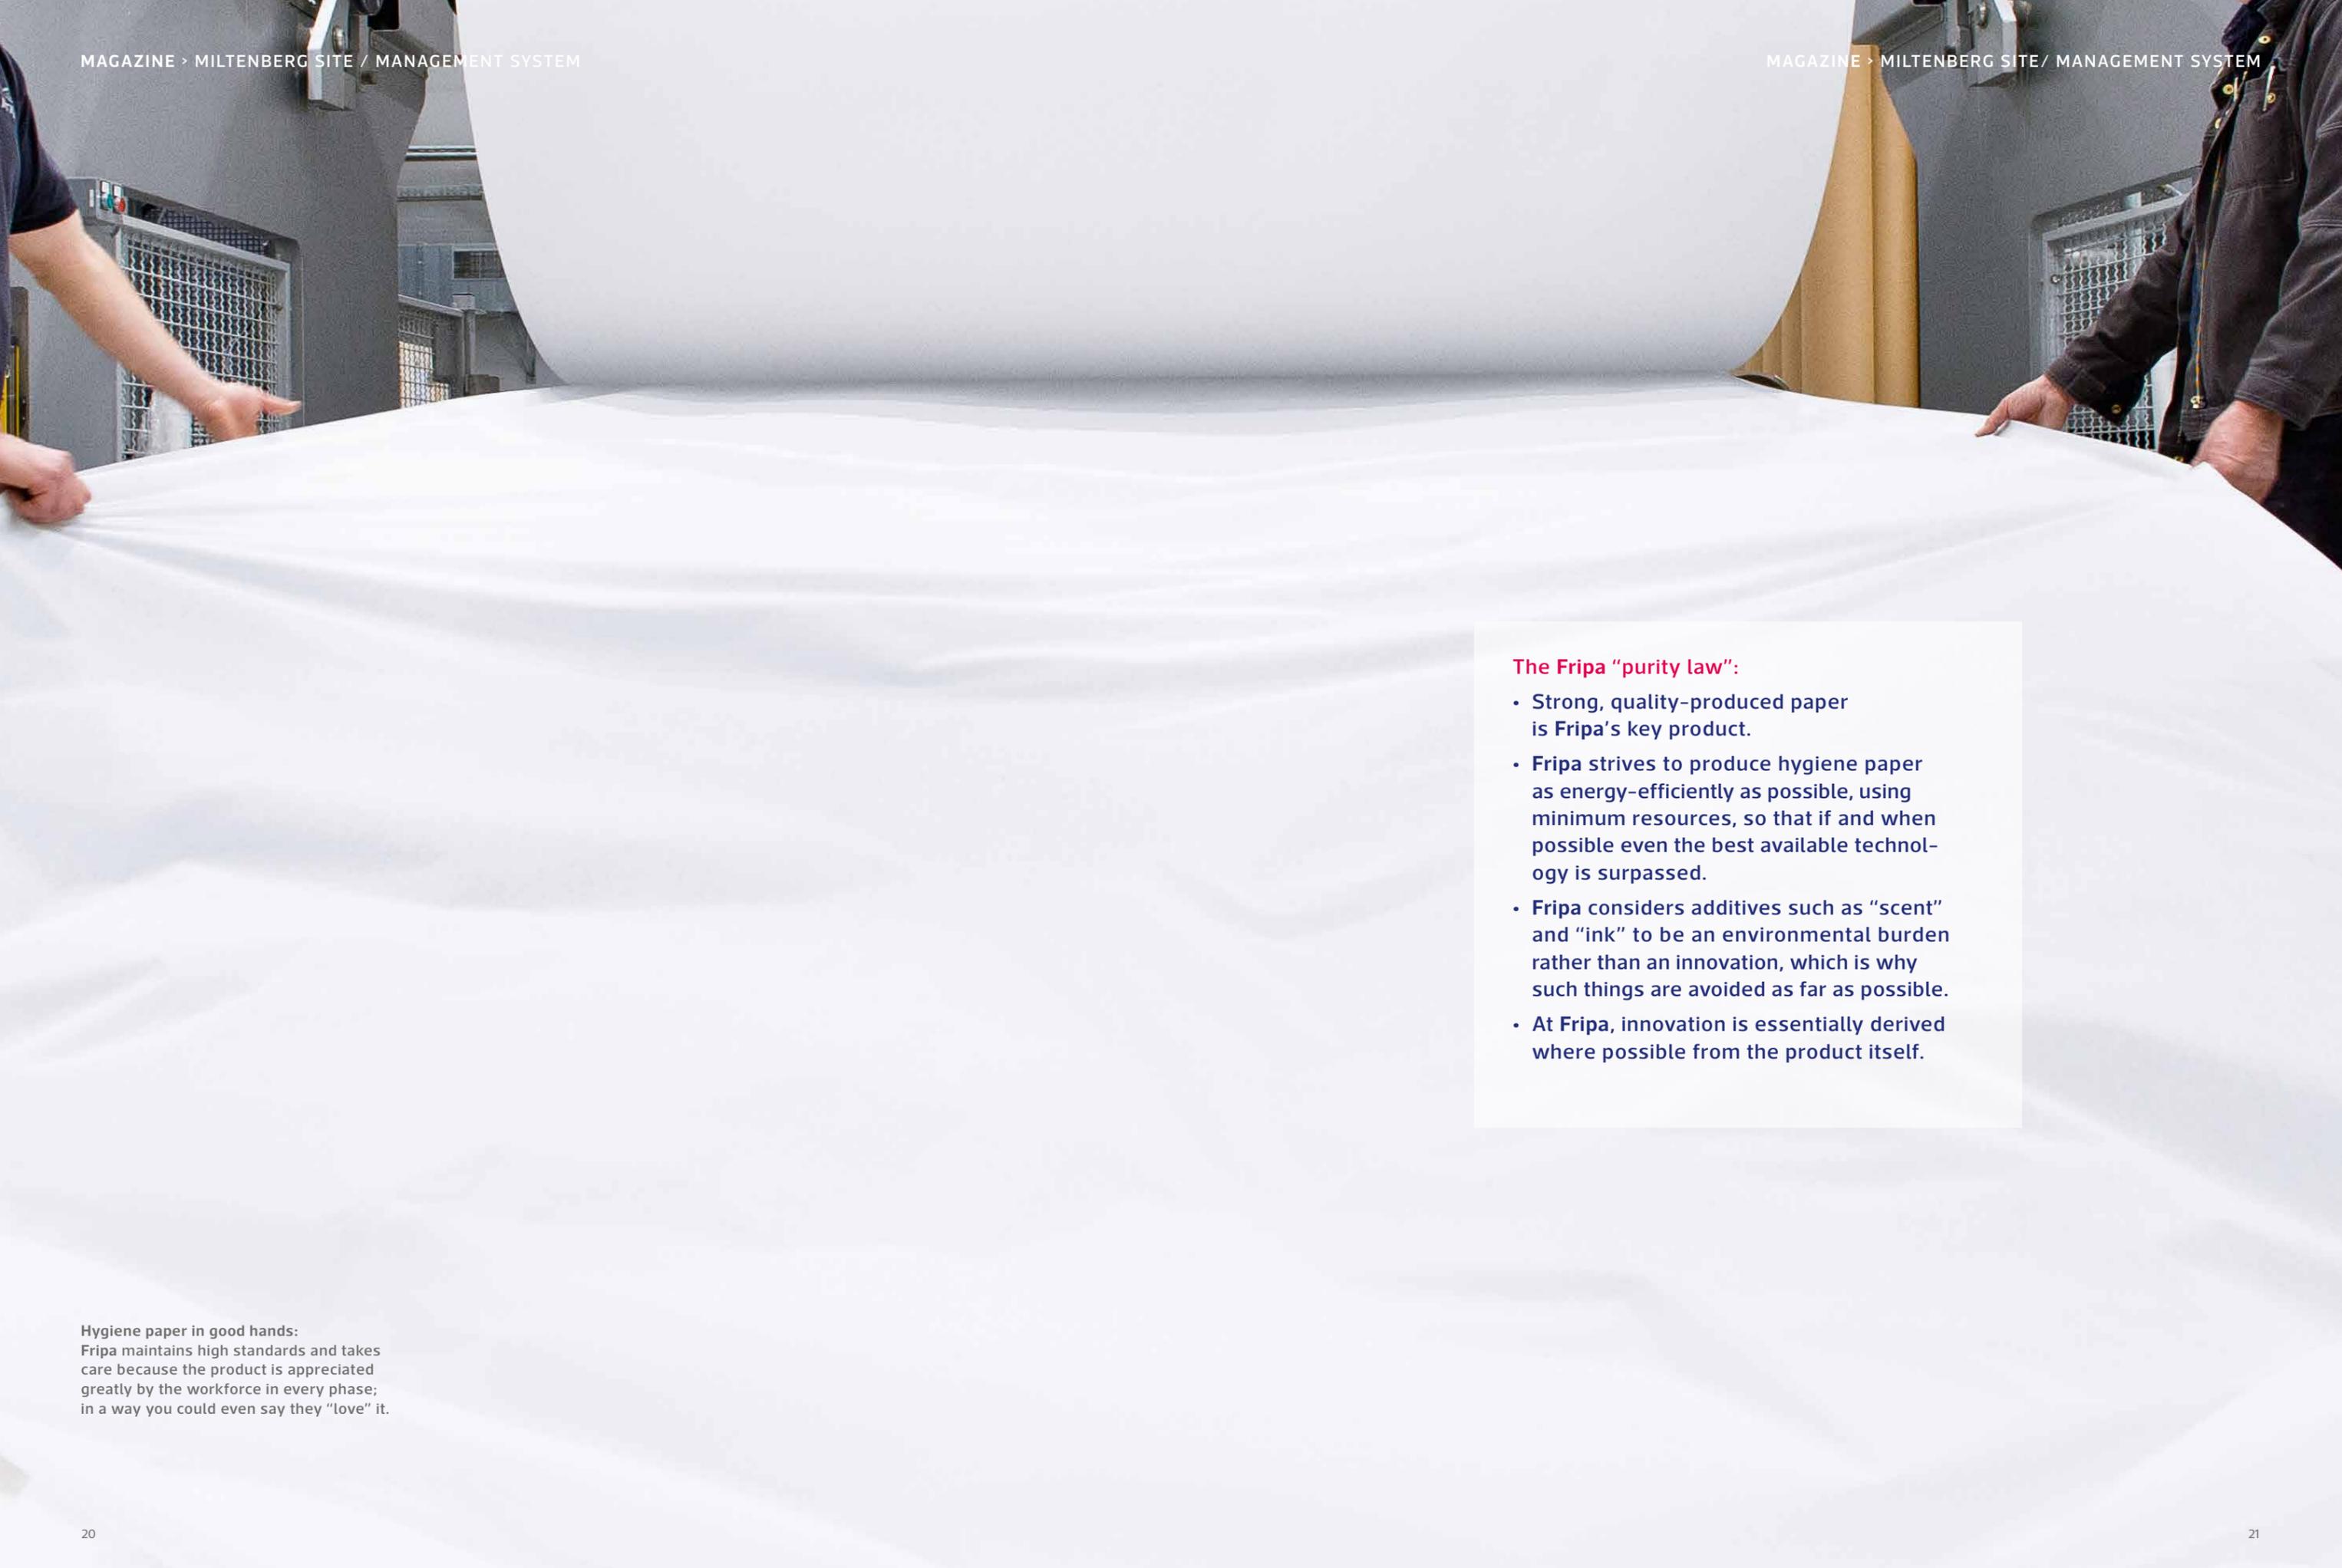

The quality of paper at Fripa has always been the measure of things. That's why Fripa employs an integrated management system which picks up long before the finished paper product is made and extends strictly through all the areas of production.

In a modern industrial business, an effective management system has to work consistently and seamlessly. At **Fripa** this system encompasses the whole process, from the purchase of raw materials, to the training and ongoing education of the workforce – and their protection – the maintenance and control of every production procedure and the finished and packaged product. This involves not only consistent testing, but also regular optimisation and

efficiency increases for every process, using all the latest technological and scientific findings; sometimes this even allows **Fripa** to exceed the best available technology in many areas. Complex audits have been performed regularly over recent years at the Miltenberg site and Fripa has achieved excellent results in them (see also pages 24/25).

From raw material to the finished product: nothing is left to chance at Fripa when it comes to producing hygiene paper that can fulfil not only numerous stress tests, but also all of the major economic and ecological demands that have to be met.

The Fripa “purity law”:

- Strong, quality-produced paper is Fripa’s key product.
- Fripa strives to produce hygiene paper as energy-efficiently as possible, using minimum resources, so that if and when possible even the best available technology is surpassed.
- Fripa considers additives such as “scent” and “ink” to be an environmental burden rather than an innovation, which is why such things are avoided as far as possible.
- At Fripa, innovation is essentially derived where possible from the product itself.

Hygiene paper in good hands:
Fripa maintains high standards and takes care because the product is appreciated greatly by the workforce in every phase; in a way you could even say they “love” it.

What does Fripa try to make as small as possible? Its footprint.

Paper manufacturers bear a special responsibility to the environment. That is why the entire production process at Miltenberg is designed to consume as little energy as possible, to produce as little waste and waste water as possible, and to protect resources demonstrably.

As a paper manufacturer, **Fripa** is an intensive user of water, electricity and gas, and therefore necessarily confronted by many of today's environmental questions. That's why the company works constantly to optimise its consumption of essential resources. It consistently adheres to the many laws, regulations and approvals that apply in today's Europe. As a result of its own initiative, its behaviour as an industrial manufacturer is based upon the ideals of modern industrial ethics. This is why all facilities are regularly proven to comply with high environmental standards (see pages 24/25). **Fripa** intentionally utilises carefully selected raw materials and supplies which comply with increasingly strict

criteria. For instance, one of the principles of the company is to use only 100% chlorine-free cellulose of the stringent "TCF" grade. Also, in Miltenberg, only cellulose from sustainable forestry and legal logging sources is used, as demonstrated by our FSC® C018265 and PEFC™ certification. Not less fundamentally, only ecofriendly PE and PP sheeting and cardboard which can be recycled are used. Leftover waste such as sheeting, wood and metal is sorted and recycled. The assembling of the new PM7 adhered to the very latest specifications, and its operation since the end of 2014 has meant a reduction in energy consumption (per tonne of paper produced) and a reduction in waste and waste water.

A cogeneration plant was installed at Miltenberg in 2009 in order to protect resources. This gas turbine has an efficiency level of approximately 80% (modern electrical power stations achieve only around 40–45%) and, with its combined utilisation of generated heat and electricity, represents the most efficient method of producing energy for a paper factory. By reducing the use of fossil fuels, we avoid producing more than 17,000 tonnes of CO₂ emissions each year.

The procurement, production and sale of hygiene paper complies with the statutes on responsible forestry and on protecting global forest resources. This is demonstrated by the appropriate FSC® and PEFC™ certification.

The amount of waste water produced at Fripa has for many years been well below the average achieved by the best available technologies in the field.

While building the new hall for PM7, dedicated habitats were established for the populations of sand lizards originally native to the terrain.

Scoring points in terms of CO₂ and energy: by deciding to switch all cellulose supplies from the road to the rails beginning in 2011, the use of trucks was effectively reduced, which halved CO₂ emissions in absolute terms, preventing more than 600 tonnes of CO₂ emissions each year.

Energy reclaiming technologies are also used in the lifts and operating elements in high-bay warehouse 2, allowing an up to 50% reduction in energy usage.

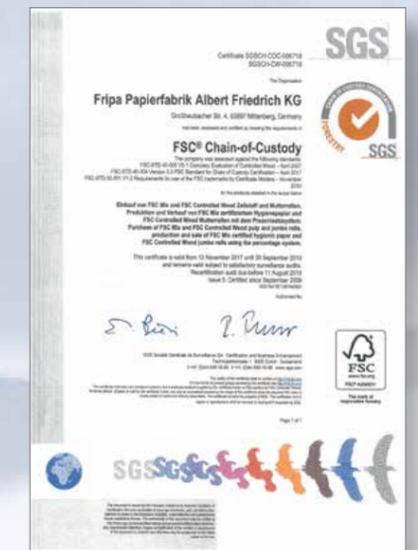

This is how sustainable quality feels: excellent.

Fripa performs regular audits and is certified in compliance with the audits that conventionally govern the market and trade. The company also has a firm grip on its responsible handling of cellulose, and is of course proud of its regional environmental awards.

The certificates shown here reflect the status as at December 2018. All of these certifications are regularly updated and documented.

The chain of custody certificates demonstrate that Fripa procures its cellulose exclusively from sustainable sources. Fripa supports this initiative and documents its outstanding procurement sources on its cellulose products, as well as its transparent supply chains, using the seals belonging to the two internationally recognised certification organisations FSC® and PEFC™.

Pay attention to PEFC™-certified products!
Pay attention to FSC®-certified products!

TÜV Rheinland has awarded Fripa its DIN EN ISO 50001:2011, DIN EN ISO 9001:2015 and DIN EN ISO 14001:2015 certificates, confirming successful auditing.

Fripa complies with occupational safety requirements defined in OHSAS 18001:2007 and NLF/ILO-OSH 2001.

Fripa's products and processes comply with the requirements of IFS Household and Personal Care Products (Version 1) at a "higher level".

www.blauer-engel.de/uz5

The major recycled paper products made by Fripa carry the "Blauer Engel" environmental mark.

Awards for handling resources, consuming energy and producing emissions responsibly.

Fripa exclusively uses 100% chlorine-free cellulose of the category TCF.

Ideas that carry weight: the ten-roll scan-pack with handle was originally developed and introduced by Fripa. This convenient bag system is now a widely established standard in European retail.

Experienced in the market. Valued as a partner.

For many decades, Fripa has been not only a dependable supplier, but also and above all a personal partner working closely with its allies in specialised and grocery retail.

Fripa offers a diverse, competent range of hygiene papers, from soft toilet paper, to tissues and household paper towels, all the way to durable cleaning and paper cloths and medicinal rolls.

Many of these products are used "away from home" in the professional hygiene supplies segment. Beyond that, products made in Miltenberg mostly take the form of private labels to grocery retailers and reach millions of consumers in Germany and neighbouring European countries. In both these fields it is important not only to supply products, but also to help shape the market. At Fripa, this is done by developing new and improved paper and packaging technology, as well as new packaging designs. This aspect of Fripa's own engineering culture has permitted the company to initiate new trends and

establish new standards based on outstanding ideas and powerful technologies. But this can only happen if you are able to respond flexibly and spontaneously to the complex demands of customers. To do that it is essential to think constructively in terms of possibilities, something for which Fripa is known and appreciated in the market.

Responding quickly and appropriately means understanding exactly what a product has to do, where, and for whom. It is only with this personal understanding that you can develop apt solutions around paper quality, the associated packaging technology, and even, where required, a professionally produced packaging design that is correspondingly effective at the POS.

That's how Fripa creates strongly positioned products for modern hygiene that contribute reliably to every aspect of modern everyday life.

Sheet by sheet by sheet.

Fripa has always exercised its competence as an experienced and reliable partner in the professional trade area.

By providing modern private labelling involving contemporary products, millions of consumers are now supplied in German and European households.

Plenty of experience in quick turnarounds: speed plays a big role in the hygiene paper market. This product group is one of the sectors of the grocery industry with the fastest turnaround, since products spend very little time on the shelves at the point of sale on account of daily demand.

Global in outlook. Focused on Europe.

Fripa has well-established alliances with two partner factories in Poland and Switzerland. This collaboration has been built up over the years, allowing Fripa to fulfil almost all the requirements of the hygiene paper business within an 800 km radius of each of the locations.

Like any industrial enterprise, Fripa is influenced by factors such as raw material prices and their movements on the world market. But in day-to-day business, the company has always been focused very clearly on Europe. The management recognised at an early stage that the challenges of the European hygiene paper market would assume an international dimension. Alliances formed in the 1970s and 1990s with two partner factories in Switzerland and Poland have extended the radius of action considerably. All of Fripa's products and services outside of the German home market have been given a new reach in the increasingly important and prosperous market regions of Europe by these alliances. Together they form a concentrated triple-network which allows Fripa to supply European markets quickly and flexibly on demand.

Any time, any place, by any means: its two alliances allow Fripa to act flexibly throughout Europe whenever the markets demand.

One employer, 400 employees, 1000 possibilities.

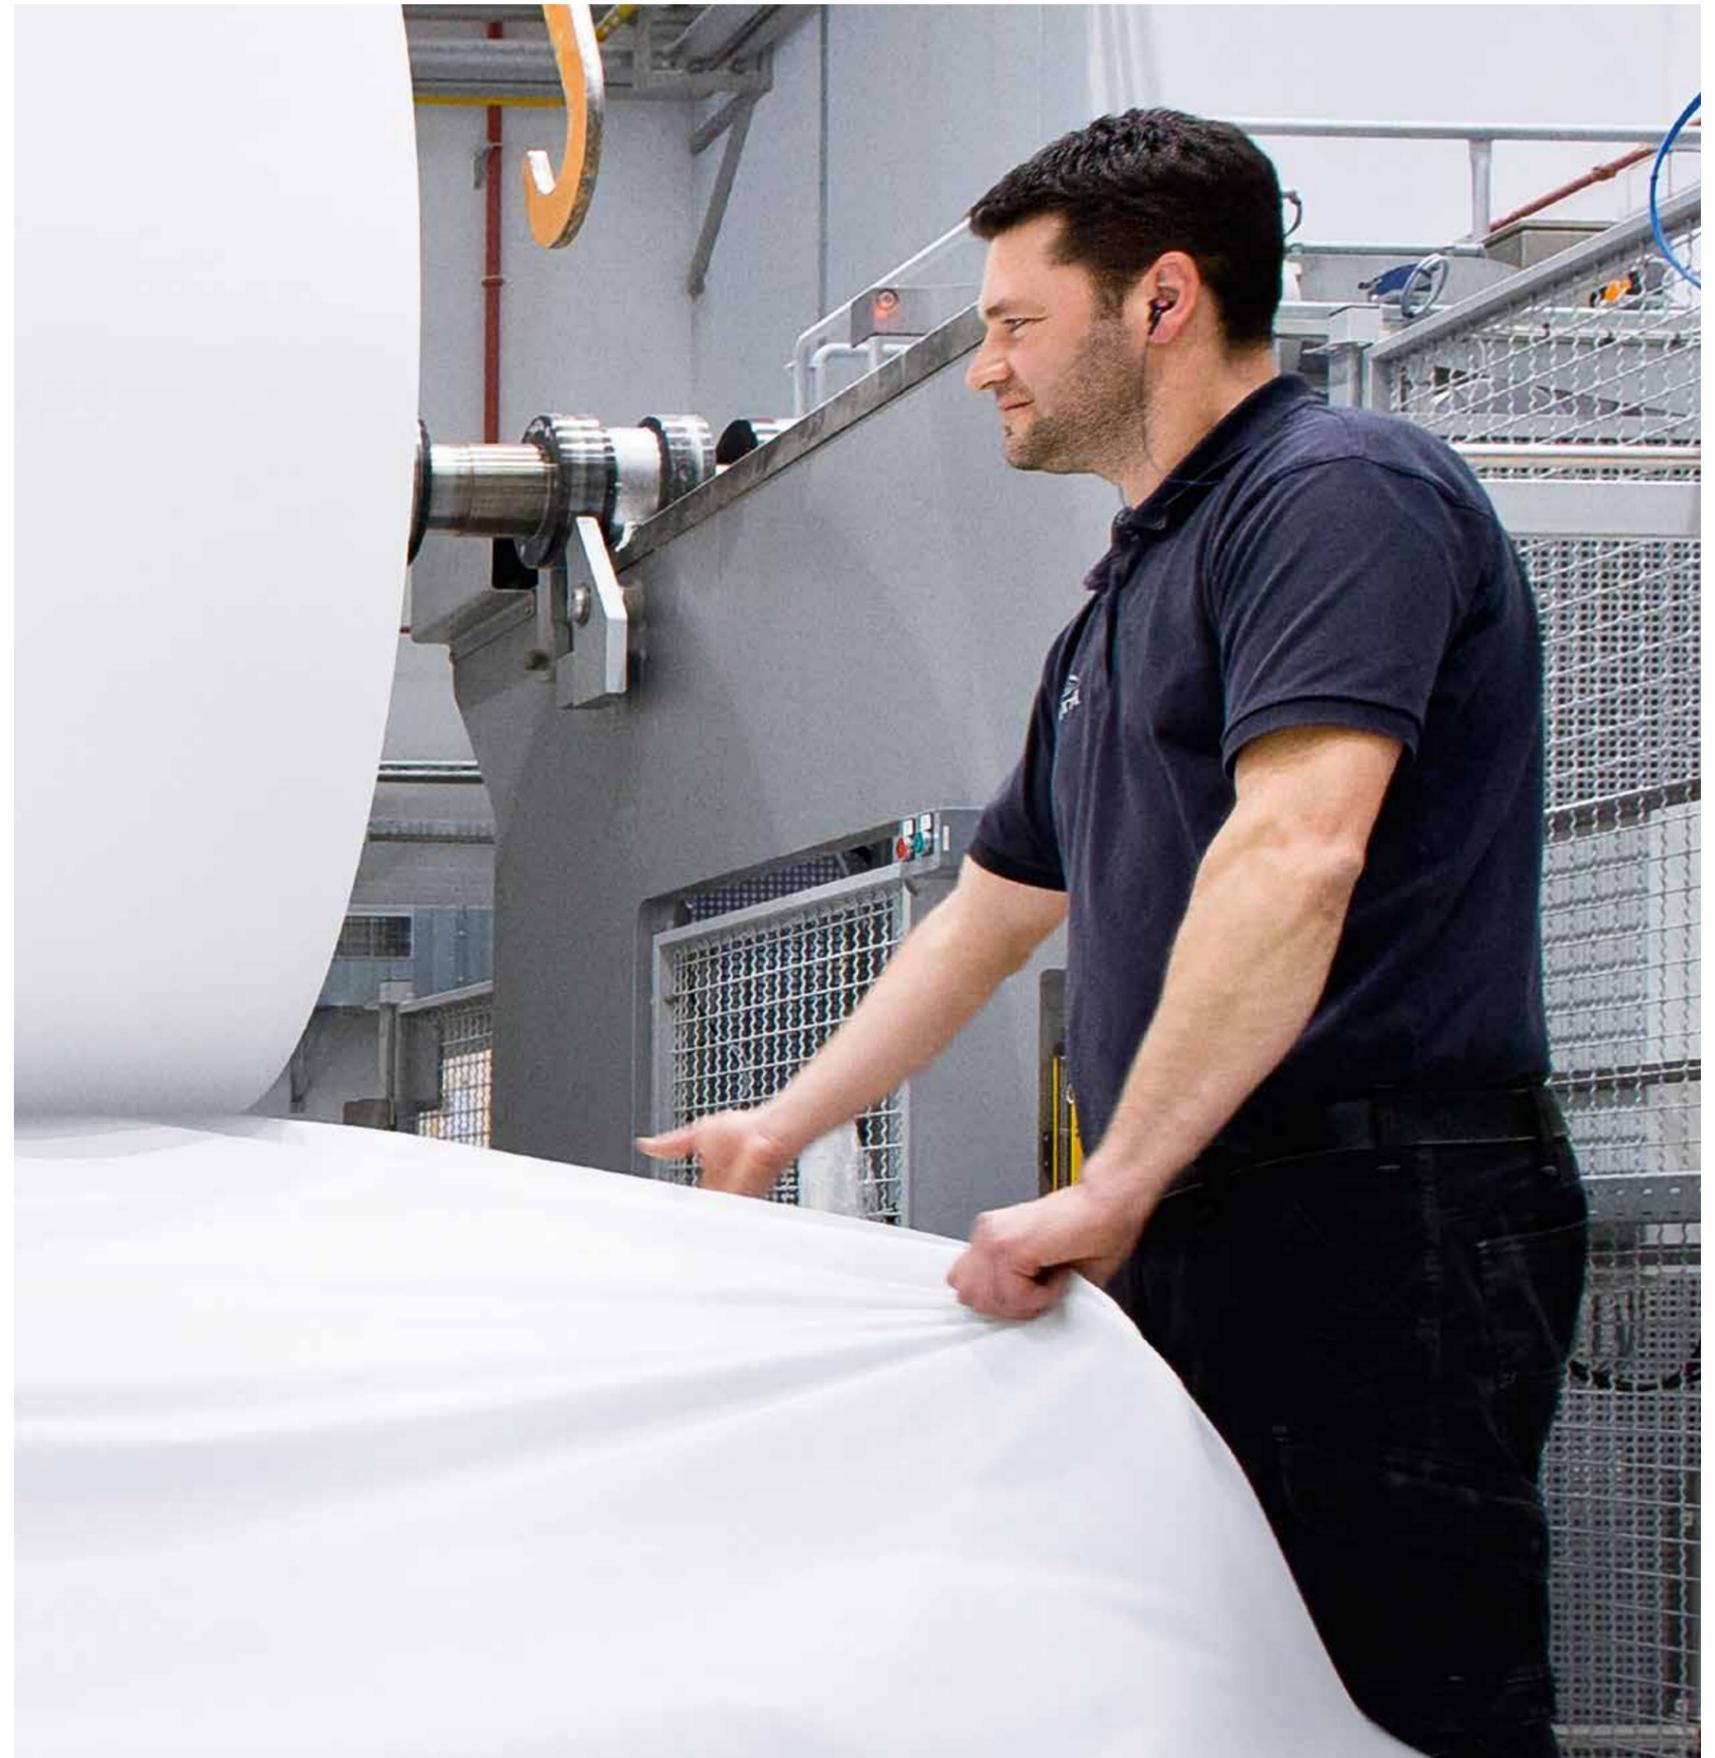

More than 400 people currently work at Fripa, and the average time they have worked there is around 13 years. This workforce is a lively and balanced mix of different age groups and varied professions in the fields of commerce, technology and the trades.

The Lower Main region of Bavaria is traditionally a strong base of Germany's "Mittelstand" (its long-established small and medium-sized companies), and Fripa has made a name for itself there in the important fields of personnel training and qualification. Its location in Miltenberg, not far from the metropolitan region of Frankfurt am Main, makes it very attractive to today's relatively mobile generation to work there and begin strong and forward-looking training at Fripa.

The company generally offers around 27 training posts in the wide range of professions that are active at the site. The main aim is to build up employees of the future from the own ranks, and in doing so to shape a promising shared future for young people and company alike. This is because Fripa is not a large, faceless corporation but a family-owned business in which personal relations are actively cultivated between people at all levels up to management.

A successful team: many different disciplines work together to make paper and to supply successful products. This success benefits not only the company but also each individual.

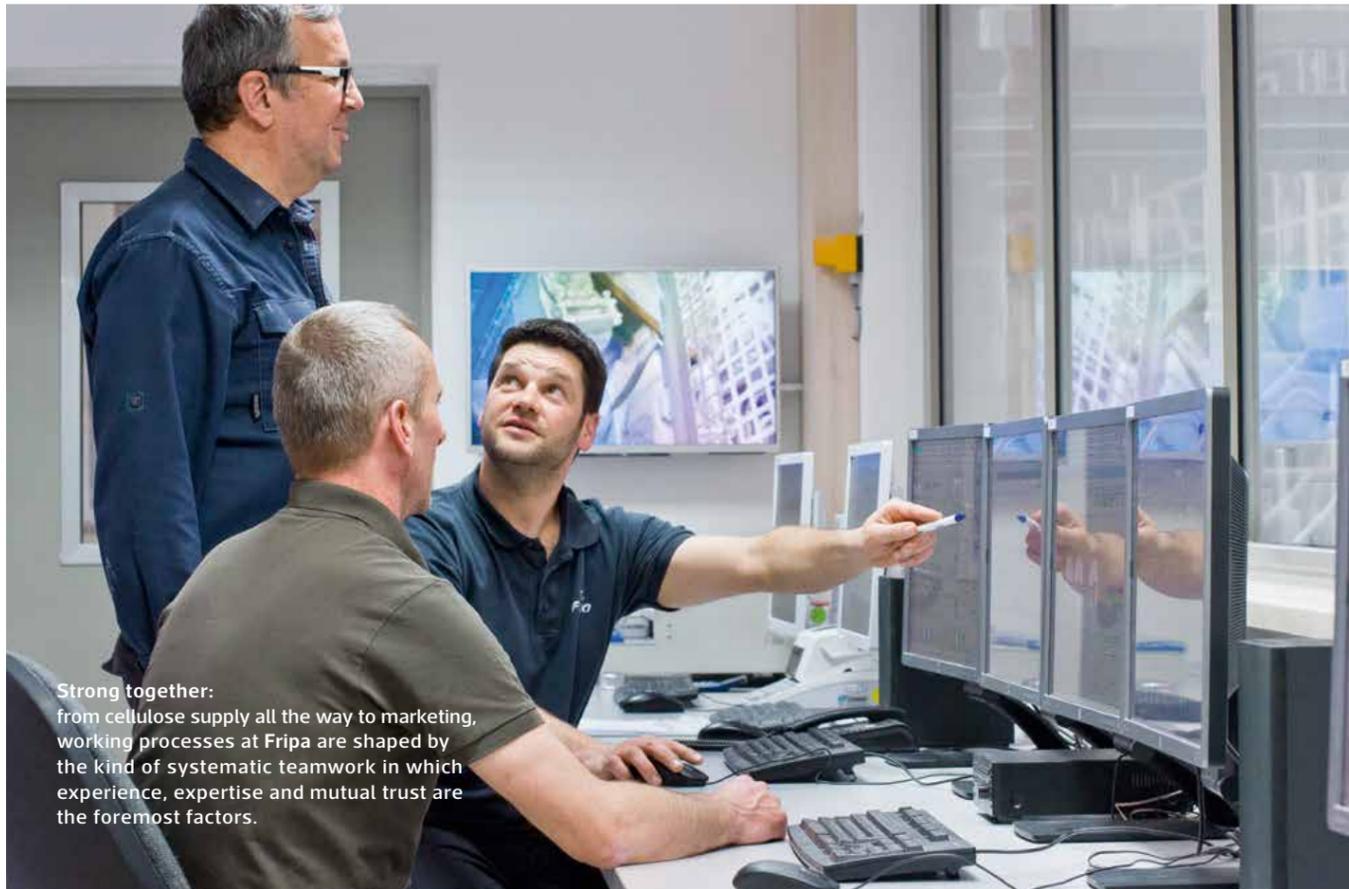

Dynamic trade and retail requires strong partners. Fripa has more than 400.

Numerous different professions are united beneath a single roof at Fripa. All of them pursue the same aim: to manufacture products of the highest quality and to supply them to all of our partners and customers in the markets with the utmost precision, punctuality, reliability and success.

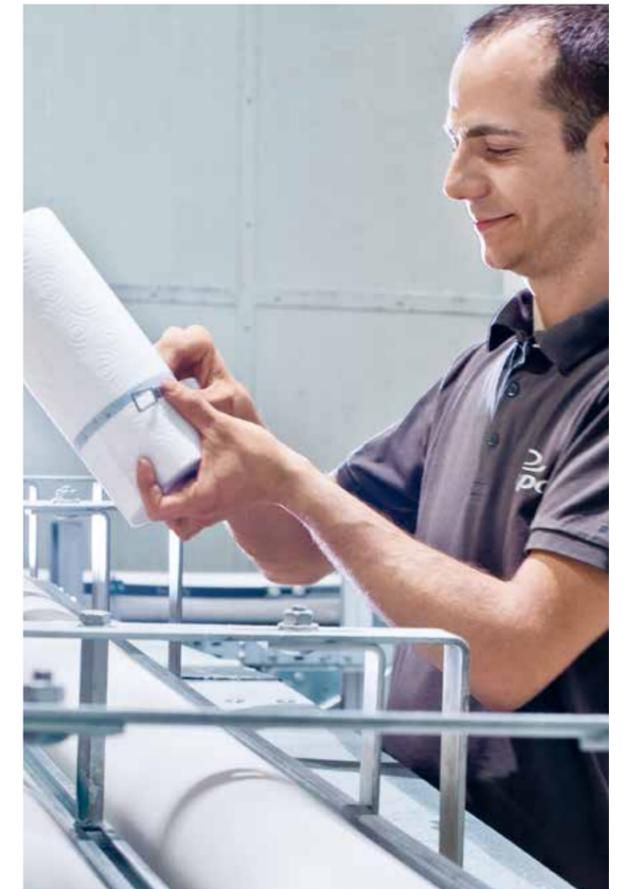

Precision down to the last detail: Fripa's sensitive machinery requires expert management, maintenance and cleaning in every phase. That can only be achieved with a qualified and motivated team of specialists who always know exactly what to do.

Strong together: from cellulose supply all the way to marketing, working processes at Fripa are shaped by the kind of systematic teamwork in which experience, expertise and mutual trust are the foremost factors.

Always with an eye on the paper: Fripa's focus in production is entirely on the high quality which every product has to demonstrate before it leaves Fripa's paper factory.

SOFT CAN ALSO MEAN STRONG

Fripa hygiene papers prove themselves daily by performing tasks in everyday life. With its highly advanced, high-quality product range, Fripa fulfils the diverse demands of retail as well as the steadily growing demands and needs of consumers for modern, appealing paper hygiene.

Fripa's well-developed specialist retail products form the foundation of an entire product range, which provides high-grade hygiene paper and accessories for all requirements and demands of the modern market.

Experience the ultimate in hygiene paper: Fripa toilet papers are developed and produced so that, in each of their categories, they always combine maximum softness and strength to achieve a quality you can really feel.

You can write much about quality. Fripa's quality you can simply feel.

Nowadays, when it comes to toilet paper, people demand more quality and comfort than ever before. Fripa meets these needs with its high-grade toilet paper products that focus fully on tangible quality.

As well as conventional demands such as whiteness, pleasant softness, tangible comfort and reliable strength, it is nowadays important to consumers that toilet paper comes from responsible sources and that its cellulose is bleached using sustainable methods.

Fripa's range of toilet paper encompasses advanced products in the purest quality which satisfy every demand and every area of use.

What could be better than comfort? Double comfort.

Extra-soft four ply **Fripa Select** toilet paper sets standards in the luxury segment. Its innovative double-sided embossing gives it maximum volume and a very pleasant feel.

Fripa Select

Premium tissue toilet paper made from 100% cellulose, bleached without the use of chlorine. Available in four, three and two ply. Four ply **Fripa Select** is manufactured using the latest technology to produce two equally soft sides. This allows attractive reversible embossed patterns to be included on both sides.

Quality in its element: as household helpers, Fripa hygiene papers have to perform very reliably indeed. That's because household paper towels either deliver what they promise or they don't – and this usually reveals itself quickly.

When is reliability most important in the household? Every single day.

Fripa household paper towels are designed to meet every strength and absorbency challenge, while satisfying the most demanding expectations of feel.

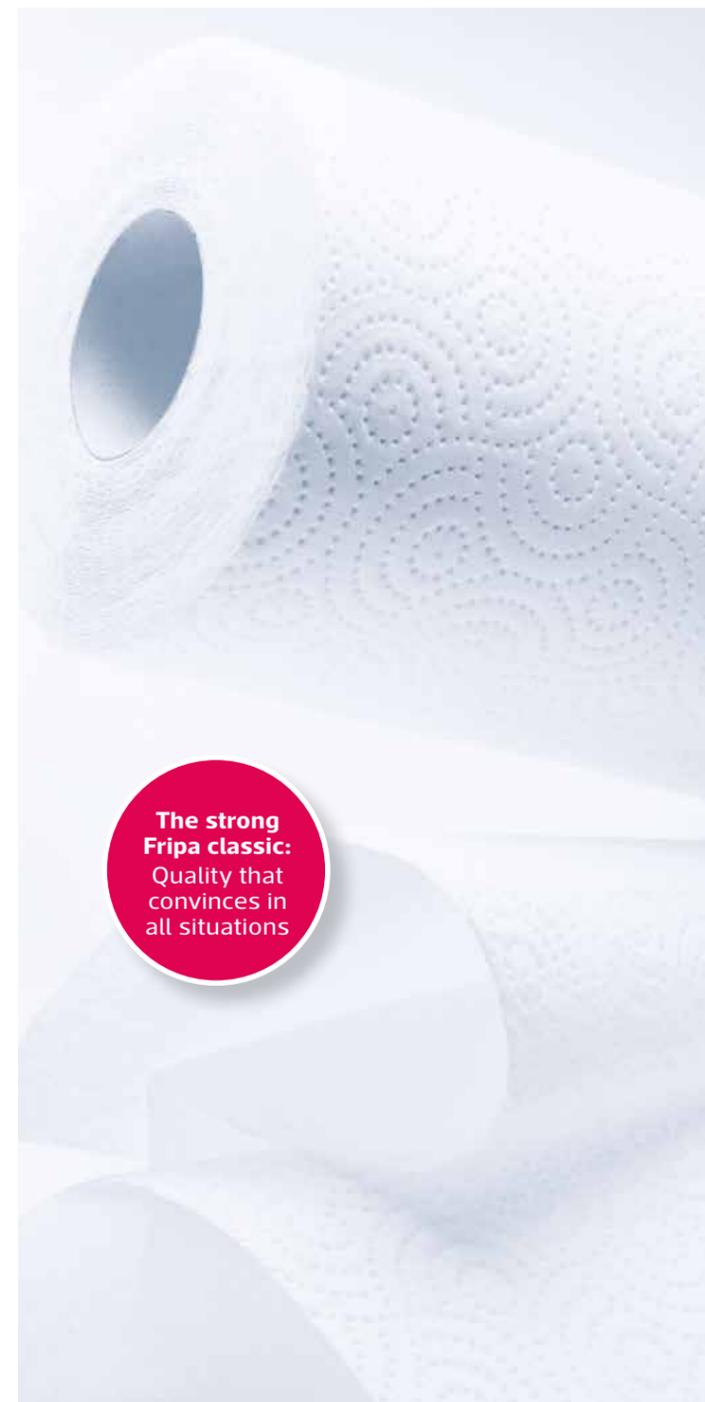

Household paper towels have to combine numerous different properties: they don't just have to be absorbent, they also have to soak up liquid as quickly and effectively as possible. It's also important that the towel holds moisture dependably and doesn't tear.

Fripa household paper towels specialise in effectively combining these important properties. They are ideally equipped to meet these challenges with their strong fibre structures, modern embossed patterns and pleasant-to-the-touch finishes.

The master performer. Reassuringly absorbent ...

Fripa Wischfix household paper towels are aptly named because they combine absorbency and soaking-up-speed so effectively that not a single drop is left over.

The strong Fripa classic:
Quality that convinces in all situations

Fripa Wischfix
Tear-resistant and absorbent household paper towels made from 100% cellulose, bleached without the use of chlorine.
With bold absorbent embossing. Highly versatile because of its strength, even when wet. Available in three ply. FSC® C018265 certified.

Ideal for delicate noses: handkerchiefs that do you good.

With its fine, four ply akito tissues, Fripa helps you care for your nose gently and with a smooth touch – and safely too – even if you have a heavy cold.

Handkerchiefs are important and loyal companions without which many everyday activities would be very different indeed. Rough tissues combined with a really heavy cold can be bad news

for delicate noses. That's why Fripa offers an advanced four ply tissue incorporating all of our experience in high-grade hygiene paper.

LET US LABEL IT!

Fripa views private labelling as a profession which opens up markets. The company has significant expertise in professionally establishing own-brands in European retail, which qualifies it as a capable yet flexible partner in professional private labelling.

Get in touch – we look forward to hearing about your project!

Fripa offers a special all-round private labelling service incorporating expert, personal advice for marketing and sales combined with precision product quality all the way to professional design. It's a service which typifies the company's performance and aspirations.

Committed to general hygiene:
Fripa paper towels are pleasant to the touch and reliably effective at drying, which is why people always like to have them at hand wherever they are.

Public hygiene? In good hands.

Whether you're at the office, out shopping, on a journey or in a restaurant – all over the world paper towels are taken for granted as part of good all-round hygiene. Public hygiene is to a certain extent dependant on the quality and reliability of these simple yet important products.

Fripa has responded to this state of affairs by producing a series of systematically varied paper towel product lines corresponding to all of the different areas in which they are used.

Pleasant and strong: keeping a firm grip on hygiene.

Wherever paper towels perform their crucial service in public sanitation areas, **Fripa paper towels** play a visibly hygienic role.

Fripa Ideal

Absorbent, single ply V- or C-fold paper towels in ultra-white quality. For demanding hand hygiene in the washroom.

The recipe for table culture: use the best ingredients.

Attractive catering services in places like bistros and snack bars require strong, appealing napkins. Fripa napkins are the kind of reliable products that professionals value most.

Style is often about reducing things to the essentials.

Two Fripa innovation studies that show the shape of things to come: a disposable dog towel and a technology that does away with cardboard tubes inside rolls of paper towels. These ready-for-production ideas are marketable and pioneering.

SUBSTANTIAL INNOVATIONS

Fripa has its own creative innovation management system which allows it to develop, inside the company, regular studies and fresh approaches revealing potential product concepts coupled with appropriate marketing strategies. The aim is to investigate new markets for the hygiene paper product group and, in doing so, actively shape the industry for the future.

Dogs enjoy themselves when they play so much that they often return with wet, dirty paws and a smelly coat. To Fripa this is a clear case of paper-based hygiene. And that's why FROTD OG was developed.

Absorbent:
Special tissue structure absorbs a particularly large amount of dirt and moisture

Flexible:
Towels as a hygienic base on the go and at home

Ecological:
The modern FROTD OG towels are 100% compostable

Clean:
Fur is always cleaned and dried with fresh towels

Soft:
Soft FROTD OG tissue pampers the fur, nose and paws

Convenient:
No need to wash: no animal hair or odours in the laundry

Fripa loves animals. And their owners too.

If you have a dog then you know what it means to carry a dog blanket in your car. Usually it starts smelling pretty quickly and needs frequent washing. Fripa's FROTD OG offers a simple and attractive solution: an extra-large, strong, disposable paper towel off the roll which can be used as a practical and hygienic paper towel which the dog can lie on.

This product was developed as one of the many outcomes of the internal "innovation culture", proving once again

Fripa's sense of consumers' needs and demonstrating our serious ambitions in this direction.

More than just a roll of absorbent paper: FROTD OG opens up a new category for hygiene papers at pet shops.

It's time for more content: this is where it starts.

A number of years ago, Fripa invested in what was at the time a completely new technology, unique in Europe, with which toilet paper and household paper towel rolls could be produced without the usual cardboard tubes and with more paper instead.

The first toilet paper product without a tube down the middle was introduced by Fripa and tested in the market under the brand name "vamos". Although it has not proven easy to displace the conventional cardboard tube, the new system now appears in the same or similar form in other countries and other markets

such as South America and Switzerland. Fripa believes firmly in the future of this new technology, which is why it launched **vamos** household paper towels in order to clearly and unequivocally stake its leadership claim in this new segment.

The innovative **vamos** technology is slowly but surely replacing the cardboard tube which has been commonplace for more than a century.

Strong range with lots of potential: **vamos** toilet paper, three ply and **vamos** household paper towels, three ply.

Fripa launched the second product of this series onto the market with its **vamos** household paper towels.

vamos inner rolls are hygienically sealed and easy to pull out.

The absorbent sheets of **vamos** household paper towel can easily be pulled off the roll without a cardboard tube.

vamos inner rolls provide a handy reserve in the household, garage or office.

Everywhere close at hand: **vamos** inner rolls are useful companions for everyday life, travel and sport.

WE ALWAYS LIKE TO BE PROACTIVE. PREFERABLY TOGETHER.

Do you have ideas and a vision for hygiene paper products that don't exist yet? Fripa always looks for like-minded people who aren't just dreaming of new hygiene paper territory, but who want to actually go out and conquer it.

Simply give us a call: we look forward to thinking together about things nobody has even thought of yet.
