

Hygienepapier heute.

Passion
for paper

Always a
layer better

Managing partner Verena Queck-Glimm
and the three managing directors Torsten
Bahl, Andreas Jörn and Jan Wohlbold

With heart and high-tech to real quality

With a great deal of experience, passion and state-of-the-art technology, high-quality hygiene papers and household papers are produced in Miltenberg for people and markets in Europe.

We have been active in the paper industry for more than 100 years - for over 75 years at our Miltenberg site. The world of hygiene has changed massively since then. With timeless quality and a constant stream of new ideas, we have always managed to keep our finger on the pulse. Every day we meet the growing demands and multiplied requirements and fulfill them with reliability. Hygienic paper today.

The roots of our company go back to 1911, when Hermann Friedrich founded a paper processing company in Berlin. Taken over by his sons Albert and Kurt as early as 1932, the new paper mill in Miltenberg was finally established in 1948 under the leadership of Albert Friedrich. With a tradition-conscious view of the past, Fripa works every day on strategic planning and its implementation for a good and secure future.

1911

Founding of a paper processing company by Hermann Friedrich in Berlin.

1948-50

Founding of Fripa – ‘Friedrich Papier’ – by Albert Friedrich and construction of the factory in Miltenberg.

1950

Start of paper production and processing at the Miltenberg site with a crepe paper machine and various processing machines.

1974

Development and production of special tissue for the incontinence sector. Commissioning of a paper machine for tissue materials in Miltenberg.

1987

New paper machine for crepe grades replaces the previous production capacities.

1998-2006

Commissioning of new rewinder lines for toilet papers, kitchen papers and paper towels.

2007

Handover of the management from Ursula Queck to her daughter Verena Queck-Glimm (granddaughter of Albert Friedrich).

2008

Certification according to DIN EN ISO 14001.
Start-up of the new toilet paper production line VI.
Commissioning of the PM6 paper machine.

2009

A combined heat and power plant begins supplying energy to the company.

2010

Certification of the Chain of Custody according to FSC® and PEFC. Expansion of the factory premises’ certification according to OHSAS 18001.

2011

Commissioning of the new, fully automatic high-bay warehouse. Start-up of the new toilet paper production line VII.

2012-13

Certification according to DIN EN ISO 50001:2011.
Certification according to IFS (Household and Personal Care Products, ‘Higher Level’).

2015

Commissioning of the PM7 paper machine.

2018-20

Planning and construction of a further production hall for paper processing and an administration building.

2023

75th anniversary in Miltenberg. Development plan of Miltenberg site expansion.

2024

With the Fripa redesign, we are setting a modern example for the future - it strengthens our image, underlines our commitment to the Miltenberg location and shows us as an attractive and strong employer.

Potential times 4

In addition to our headquarters and production site in Miltenberg, we maintain partnerships with two established paper mills in Switzerland and another one in Poland. This enables us to react flexibly and quickly to changes in the market.

In Germany, in addition to our main site, we are also close to our customers with distribution warehouses in Berlin and Düren.

Paper factory Cartaseta
in Gretzenbach, Switzerland

Paper factory Tela GmbH
in Niederbipp, Switzerland

Paper factory Czerwonak
in Poznań, Poland

The Cartaseta paper mill has been a partner of Fripa since 1974. It produces high-quality, environmentally friendly tissue paper for the Swiss market. On this basis, the retail trade and the away-from-home market are served quickly and in line with demand.

Tela GmbH has been part of the Fripa group of companies since May 2021. The site in Niederbipp primarily produces tissue paper based on waste paper. The interaction between waste paper processing, sludge incineration, the paper machines and the wastewater treatment plant forms a closed cycle.

The Czerwonak paper mill close to Poznań has been producing tissue paper for over 80 years. The machine and storage technology has been consistently upgraded to the latest standards in recent years. Our partner manufactures products specifically for the Polish market directly on site.

We are
playing
a role

In one of the most modern tissue paper plants in Germany, we set new standards – from production and processing to fully automated warehouse logistics. High speeds and efficiency run through all areas. The result is not only high-quality paper, but also trust through flexibility and reliability.

High-quality hygienic papers for people and markets

Today's demands for the quality and convenience of hygienic papers are higher than ever before. Fripa meets these demands with high-quality products that focus squarely on tangible quality. For many decades, Fripa has not only been a reliable supplier, but also and above all a close personal partner in both professional and food retail.

There for the public

Public hygiene depends on the quality and reliability of simple but important products. Fripa meets this general requirement with a well-rounded range of hygienic papers and the corresponding accessories.

The heart of hygiene concepts

Fripa offers a versatile and high-quality hygienic paper range, which spans from delicate toilet paper, handkerchiefs and paper towels to high-performance cleaning and household tissues and couch rolls. Via professional retail, these Fripa products are used in the away-from-home segment of the professional hygiene supplies industry.

Fripa products meet the 'higher level' requirements of Version 2 of the IFS (= International Featured Standards) in the HPC category (= Household and Personal Care Products).

The same applies to all production processes.

Washroom

In the washroom and all other sanitary areas, Fripa combines hygiene and comfort. We attach great importance to sustainable processes and materials, from the entry-level segment to our premium products.

Healthcare

The healthcare sector is a broadly diversified field. In many cases, Fripa tissue paper becomes a silent helper. Whether as a hygienic patient pad or simply for blowing your nose. Diagnosis: A case of safe hygiene.

Workplace

Hygiene is a decisive factor for customer satisfaction, and not only in commercial cleaning and the catering industry. Many employees, regardless of their job and sector, also value a clean working environment.

Fripa products for the workplace can be used universally and are impressive in terms of feel, quality and sustainability.

The power of softness

You can write a lot about quality. With Fripa, you can feel it. Fripa's hygiene and household papers are developed and produced in such a way that they always combine maximum softness and stability in their respective category with a quality that you can simply feel.

Our range of toilet paper, household tissues and handkerchiefs offers a wide variety for private labels.

Your label. Our job!

Fripa sees private labelling as a profession that opens up markets. With personal and expert advice in marketing and sales, meticulous product quality and professional design, Fripa offers a special all-round service for private labelling that underlines the company's performance.

Service

- › Optimal product characteristics at an economical price
- › The highest production capacities, secure quality planning and flexible provision create high-performance potential

Distinctive character

- › Market success through differentiation
- › Products from Fripa make the difference
- › First-class product quality, innovative packaging engineering and contemporary design

Market understanding

- › Years of experience
- › Partnership from the idea through to the sales-ready product
- › Understanding of hygienic papers, requirements, trends and target groups
- › Intensive market research and development work

Our team

Our paper

Our strength

More of less

Fripa uses an integrated management system that coordinates all procurement and production processes - for resource-conserving, environmentally conscious and sustainable production.

1.35

litres of water saved per kilogram of paper (2021)

99.8

percent of the waste generated in the course of paper production and processing can be reused.

600

tone of CO₂ are saved per year by rail transport.

2.39

MWh/tone is the energy consumption at PM7. Fripa is setting new standards.

Responsibility for people and nature

Sustainability

Fripa uses an integrated management system that covers all procurement and production processes. This results in highly efficient production that conserves nature and important resources in the long term. We are happy to live up to our responsibility for people and the environment!

Certifications and memberships

Certifications attest to our extensive sustainability measures and activities:

- Certified according to ISO standard 14001 (since 2009)
- Certified according to ISO standard 9001 (since 2007)
- Certified according to ISO standard 50001 (since 2012)
- Environmental certification by TÜV Rheinland
- Member of the Bavarian Environmental Pact 'ÖKOPROFIT company' as part of the Bavarian Lower Main Initiative
- Founding member of the Unternehmensnetzwerk Klimaschutz (Business Environmental Network)

The future? Let's do it together!

Fripa is a modern, future-oriented family business in which a personal relationship between people is lived out at all levels. This is also reflected in the length of service of many employees. Where quality, sustainability and growth come together, real prospects for the future are created.

Commitment and team spirit, innovative technologies with trend potential as well as individual advice, quality and reliability - that's what sets us apart.

Fripa – a good name in the region

24

Production runs 24 hours
a day – 365 days a year.

12.98

years is the average
length of service.

480

motivated employees
work at Fripa.

2.100

m/min production speed is achieved by our
PM7 tissue machine – a record value.

4.000.000

rolls of hygienic
paper can be
made daily.
